UNLEASHING MARKET-MAKING POWERHOUSE: GRIGON

GriGon isn't average market maker. We bring together veteran expertise from both crypto and traditional finance, honed through collaborations with leading organizations. This unique blend fuels our mission: revolutionizing market making with cutting-edge algorithms and a client-centric approach.

Collaboration is key. We partner with talented developers and market makers to craft powerful, bespoke algorithms. Leveraging our extensive market knowledge, we overcome past limitations and deliver solutions that precisely match your needs. Think of it as an algorithm built with your success in mind.

The result? - Market making that's smarter, faster, and more responsive. We empower you to navigate market complexities with confidence. Ready to experience the GriGon difference?

THE KEY PROBLEMS WHEN WORKING WITH MARKET MAKERS

Despite the saturation of market-making offerings in the market, most projects fail to achieve desired results when partnering with market makers. The primary challenges faced by most projects include:

1. Unattractive token charts on exchanges: The token chart is also one of the most important indicators for investors and traders before entering the market. However, market makers often fail to maintain an attractive chart due to their use of primitive algorithms, causing large spikes, gaps, and chart downtime.
2. Poor quality liquidity algorithms: Market liquidity is a pivotal factor for many institutional investors when considering investments in a particular project. However, a significant portion of market makers tends to overlook this indicator, thereby reducing the likelihood of attracting substantial institutional investors to enter the market. This is evidenced by the low liquidity scores of the token.
3. Inability of market makers to control the market: Most market makers in the market fail to pay sufficient attention to market control, thus they are unable to support the token price under significant selling pressure, preventing sharp price declines and reducing excessive token volatility, thereby creating a more stable positive market trend.
4. Low trading profitability on the market: For most market makers, trading algorithms are not their main priority, resulting in low trading profitability for projects and hindering further development.
5. No interest in achieving client goals: Most market makers operate with a uniform strategy for all their clients, which does not adequately address the modern challenges of the crypto market and prevents projects from effectively achieving their set objectives.

All the above-listed problems are acute for most web-3 projects when working with market makers. Grigon's main goal is to leverage the experiences and mistakes of other market makers and adhere to a new standard of market making with clients dictated by the rapidly evolving web-3 market.

A NEW APPROACH TO MARKET MAKING WITH GRIGON.

We have developed a new standard for market making in the industry. Our primary goal is to provide clients with a personalized approach to each project, constructing strategies based on current needs and future objectives. We aim to ensure that the market, with our assistance, fully serves the client's interests, generating profits and attracting new users to the project.

1. Sophisticated market making algorithms: The primary focus of our extensive team of developers has been on the creation of entirely novel algorithms to bolster market support. As a result of the development, the market will consistently sustain high liquidity, while also presenting an appealing chart across all timeframes. Through a contemporary approach, liquidity on exchanges, as well as the chart, will exhibit maximum organicity.
2. Complete market control: Our approach to managing each market involves developing action strategies for any scenario. The main focus is on complete control of the token price, which helps prevent sharp declines and create a positive trend.
3. Advanced trading algorithms for the client: Special attention from our team has been devoted to developing trading algorithms that allow for profit generation from organic market activity regardless of the current market situation. Utilizing machine learning and artificial intelligence, our trading algorithms have reached an entirely new level, enabling profit generation for each project in the market. That way we provide clients with the opportunity to invest more in project development and the market.
4. Client goal focus: Our primary objective when collaborating with clients is to achieve the project's set goals. We construct a unique market development strategy to provide maximum support for the project's growth, offer our vision for market development, and listen to the client's desires, thereby creating the best developmental trajectory to accomplish all targets.
5. Assistance in project development: Grigon originated as a Web-3 consulting company, specializing in project creation, scaling existing projects, and crafting unique solutions in the crypto industry. Leveraging our expertise, we assist clients not only in market management but also in reshaping the projects themselves, enhancing overall efficiency.

Grigon is ushering in a new era in the market-making industry, overturning old and outdated principles employed by other market makers. We invite you to join us in shaping the future and embark on a collaborative journey together.

OVERVIEW OF GRIGON MARKET MAKING ALGORITHMS

GRIGON MARKET MAKING

Well-organized and dynamic charts which demonstrates significant organic activity, capturing the attention of traders and potential investors. The charts' lack of gaps and consistent volumes also contribute to its appealing and natural appearance.

- Organic looking orderbook
- Tight spread;
- Dynamic liquidity algorithms for orderbook;
- No fake-looking limit orders in the orderbook;

OTHER MARKET MAKERS

There are concerns regarding volatility, potential price manipulations, and significant fluctuations in candlestick patterns. It is observed that candles on charts exhibit different opening and closing prices within the 5-minute timeframe. The presence of consistent volumes on smaller timeframes is indicative of bot activity, resulting in an unnatural chart pattern. Additionally, there are frequent spikes in both buying and selling activities, even when considering the hourly time frame.

0.000001	9,876,417	13,440,013.9

- Extremely low liquidity in the orderbook, resulting in substantial spikes on the chart;
- Big spread (more than 1%);
- Unattractive to potential investors and traders;
- Orderbook liquidity imbalance;

BESIDE MARKET MAKING

- **Consulting:** In addition to our roles as market makers and traders, we provide consulting services to offer added value to our clients. In the rapidly evolving web3 landscape, numerous promising ideas and transformative solutions emerge daily, yet even the most successful and talented individuals may require assistance at times. Our team is dedicated to supporting projects in realizing their visions and positively impacting the web3 industry.
- **Pre-TGE and post-TGE Consulting:** Numerous projects encounter challenges in devising an effective pre-TGE strategy, encompassing aspects such as formulating impactful marketing campaigns, selecting appropriate exchanges, negotiating favorable listing terms, and establishing optimal decentralized exchange (DEX) platforms while structurally creating liquidity pools. Our objective is to optimize efficiency and financial resources for our clients, which is why we provide comprehensive assistance with all pre-TGE matters. Following the project launch, we continue to support our clients in formulating strategic plans to enhance project development.
- **Marketing and Cross-Marketing:** Leveraging our extensive network of partners, we facilitate the discovery of new collaborations for projects. Additionally, our team assists in crafting innovative marketing campaigns to ensure projects stay ahead of the curve.
- **IDO and CEX Connections:** We are committed to simplifying the journey for our clients, harnessing our network of partners to secure optimal listing conditions. Importantly, we offer this service at no cost to our clients, prioritizing their success above all else.

OUR CLIENTS:

WE LOOK FORWARD TO WORK WITH YOU!

Our commitment goes beyond mere expertise; it's about addressing critical needs with dedication. We passionately advocate for worthy projects, guiding them towards recognition and advancement in the competitive market.

At Grigon, we prioritize transparency, clarity, and integrity as pillars of trust within the market-making industry. These values are paramount for projects seeking our support, and we uphold them in all our endeavors.

Our ultimate aim is to deliver unparalleled value that drives the success of our clients, fostering enduring partnerships built on mutual trust and prosperity.

Don't navigate Web3 alone. Partner with GriGon and secure your success. Get in touch now
